

Asset Management

Fixed Assets

The Reflex Fixed Asset Management Module gives you granular control over your assets, allowing you to track land, equipment and buildings **down to the smallest detail**. The system **monitors** routine processes such as scheduled maintenance and repair so you can be proactive in taking timely **preventive** maintenance. This module also generates the appropriate work orders to ensure efficient, trackable scheduling.

- Capital Budgeting for projecting the costs of the asset
- Preventative Maintenance Planning and Work Order Generation
- Depreciation Accounting for tax and book value
- Billing module to charge out the assets for internal or external projects
- Capture all asset information

Inventory

The Reflex Perpetual Inventory Module's integration to the Reflex suite allows you to keep a tight rein on purchasing and warehousing items throughout construction, home building, or property management processes. With perpetual inventory, you always know exactly how many items are on hand. Once an item is transferred out of inventory to its respective project or building, costs are automatically transferred based on FIFO, weighted average, actual or standard costs. Reflex Inventory will perform re-order and trend analysis calculations to notify you when you need to order additional stock for "just in time" inventory management.

- Multiple warehouses for parts inventories
- Define segments and classes of inventory items, which gives better ability for reporting and variance tracking
- Automatically generate Work Orders and Purchase Orders when selling a finished product
- Reorder / Trend Analysis – based on trend, EOQ, (Economic Order Quantity), Minimum / Maximum, the Reflex suite will notify you when it is time to reorder materials
- Barcode inventory items, and track electronically as the item moves throughout the warehouse
